EXPERIENCES

Frontend Developer

PATHARITECH PVT LTD

09/2022 - Present

Ranchi, India

Specialized in Integration domain. It provides solutions to our esteemed customers and help them to grow faster with the enhanced new technology.

Achievements/Tasks

- Creating a user-friendly application to gather data from villages proved to be a challenging task, particularly since the target audience had average digital literacy skills. Traditionally, data was recorded on paper, which often got lost (www.nskonline.in).
- Creating a **school app** for **students** and **tutors**, where teachers can take **attendance** and students can see their attendance, **pay fees**, send messages, send **coursework** and homework to the students, and **view attachments**.
- We integrated **RazorPay** APIs, including the commerce **API** for payments, and the Stripe and RazorPay payouts API to pay back our sellers, while maintaining their balances.
- Creating a **school website** creation service, school can easily **manage** and **update** information about events, **news**, curriculum, staff, and students. Our website design is user-friendly and easy to navigate, with a **responsive** layout that works seamlessly across all devices (www.educastack.com).
- Converting wireframes into reusable components using **Angular, HTML, Bootstrap** and browser **APIs**.
- Extensively used **SourceTree** for version controlling and regularly pushed the code to **GitLab**.
